

DAILY DRILLING REPORT (SYNTHETIC)

OIL-DGB-003 - Digboi-003

NWIS prototype document - not an Oil India Limited operational record

Field / Formation	Digboi / Barail
Report Timestamp	2024-05-28 18:00:00
Current Depth	2837.0 m
Mud System	PHPA Water-Based Mud
Well Risk	High (58.8/100)
Latest Alert	Normal

Recent Drilling Parameters

Operational Events / Lessons

Cementing Issue (High) at 2282 m: Cementing Issue at 2282 m in Barail. Observed returns did not match calculated displacement. Recorded pressure-volume response for remedial decision. Outcome: Cementing sequence stabilized within revised limits. Cement returns 49% with density 14.09 ppg. Recommended action: Alert when cement-return percentage drops below expected envelope

Torque Spike (Medium) at 2347 m: Torque Spike at 2347 m in Barail. High torque developed while WOB remained elevated. Reamed short interval and circulated cuttings. Outcome: Torque returned to operating band after parameter change. Torque 347 kNm, drag 15.6 t, ROP 10.3 m/h. Recommended action: Set warning on rapid torque rise with RPM instability

Pressure Spike (High) at 2518 m: Pressure Spike at 2518 m in Barail. Short-duration high-pressure excursion was recorded. Reduced pump rate and checked circulation response. Outcome: Operations resumed after stable pressure trend. SPP 4299 psi at flow-in 833 LPM. Recommended action: Reduce pump rate and verify circulation if pressure trend persists

NPT (High) at 2646 m: NPT at 2646 m in Barail. No depth progress occurred during the recorded interval. Recorded downtime cause and maintenance action. Outcome: Equipment restored and drilling resumed. Recommended action: Track recurring NPT cause by rig and equipment family

This DDR is generated from synthetic telemetry for OCR/NLP/RAG and risk-engine prototyping.
