

DAILY DRILLING REPORT (SYNTHETIC)

OIL-LKW-008 - Lakwa-008

NWIS prototype document - not an Oil India Limited operational record

Field / Formation	Lakwa / Kopili
Report Timestamp	2020-10-11 18:00:00
Current Depth	3398.0 m
Mud System	KCl Polymer WBM
Well Risk	Moderate (44.4/100)
Latest Alert	Normal

Recent Drilling Parameters

Timestamp	Depth	SPP	Torque	RPM	MW	Flow In/Out	ROP	State
10-06 07:18	3305	3787	333	115	11.94	769/782	14.9	Operational Variation

Operational Events / Lessons

Stuck Pipe (Medium) at 2560 m: Stuck Pipe at 2560 m in Kopili. Torque and drag increased while ROP declined. Reduced WOB and increased hole-cleaning circulation. Outcome: Restriction cleared without fishing operation. Torque 305 kNm, drag 35.8 t, ROP 10.1 m/h. Recommended action: Trigger stuck-pipe warning on combined torque/drag/ROP deterioration

Pressure Spike (High) at 2772 m: Pressure Spike at 2772 m in Kopili. Standpipe pressure increased rapidly at nearly stable flow. Reduced pump rate and checked circulation response. Outcome: Restriction cleared without further escalation. SPP 4767 psi at flow-in 784 LPM. Recommended action: Reduce pump rate and verify circulation if pressure trend persists

Stuck Pipe (Low) at 2887 m: Stuck Pipe at 2887 m in Kopili. High drag was recorded while circulating remained possible. Stopped drilling and circulated bottoms-up. Outcome: Torque/drag returned toward baseline. Torque 312 kNm, drag 23.4 t, ROP 8.2 m/h. Recommended action: Plan preventive wiper trip near analogous interval

Pressure Spike (Medium) at 2940 m: Pressure Spike at 2940 m in Kopili. Standpipe pressure increased rapidly at nearly stable flow. Reduced pump rate and checked circulation response. Outcome: Standpipe pressure normalized after circulation. SPP 4732 psi at flow-in 827 LPM. Recommended action: Compare SPP against offset-well envelope at equivalent depth

This DDR is generated from synthetic telemetry for OCR/NLP/RAG and risk-engine prototyping.
