

WELL COMPLETION REPORT

SYNTHETIC SCANNED COPY - NWIS PROTOTYPE

Well ID: OIL-BGJ-001

Well Name: Baghjan-001

Field / District: Baghjan / Tinsukia

Formation: Barail (BAR)

Spud / Completion: 2013-12-26 / 2014-02-12

Measured depth / TVD: 2906 m / 2852 m

Formation interval: 1256-2168 m

Lithology: Fine sandstone with carbonaceous shale

Mud system: PHPA Water-Based Mud

NWIS well risk: Moderate (52.3/100)

SIGNIFICANT EVENTS:

2014-02-04 | Mud Loss | Critical | 2466 m

Observation: Active pit volume declined during stable pump rate

Mitigation: Reduce ECD, treat losses with LCM and confirm stable returns

Lesson: Track flow balance and pit volume trend before losses become severe

2014-02-09 | Stuck Pipe | Critical | 2731 m

Observation: High drag was recorded while circulating remained possible

Mitigation: Condition mud and verify cuttings transport before connection

Lesson: Use offset stuck-pipe depth to increase circulation and reaming frequency

SCANNED
