

WELL COMPLETION REPORT

SYNTHETIC SCANNED COPY - NWIS PROTOTYPE

Well ID: OIL-BRH-002

Well Name: Borholla-002

Field / District: Borholla / Jorhat

Formation: Lakadong+Therria (LKT)

Spud / Completion: 2019-10-01 / 2019-12-12

Measured depth / TVD: 3612 m / 3595 m

Formation interval: 1785-3067 m

Lithology: Sandstone with carbonaceous interbeds

Mud system: Low-Solids WBM

NWIS well risk: Moderate (51.3/100)

SIGNIFICANT EVENTS:

2019-10-10 | Mud Loss | Critical | 638 m

Observation: Partial returns observed at shale shaker

Mitigation: Optimize hydraulics and maintain conservative ROP through loss interval

Lesson: Track flow balance and pit volume trend before losses become severe

2019-11-28 | NPT | Critical | 2951 m

Observation: ROP dropped to zero during equipment unavailability

Mitigation: Classify NPT cause consistently for offset-well learning

Lesson: Recurring equipment downtime should influence planning and spares

SCANNED
