

WELL COMPLETION REPORT (SYNTHETIC)

OIL-CHR-009 - Charali-009

NWIS prototype document - not an Oil India Limited operational record

API Number	OIL-ASM-000107
Field / District	Charali / Biswanath
Block	PEL-ASSAM-08
Basin	Assam-Arakan
Formation	Barail (BAR)
Spud / Completion	2022-09-12 / 2022-11-22
Measured / TVD	2887 m / 2850 m
Trajectory	Directional; inc 26.5 deg; az 335.3 deg
Formation Interval	1632-2653 m
Lithology	Interbedded sandstone and shale
Pore Pressure Reference	3291 psi
Fracture Gradient	14.60 ppg
Mud System	Low-Solids WBM
NWIS Well Risk	High (59.2/100)

Casing Program

String	Set Depth (m)	Purpose
20 in conductor	80	Conductor
13 3/8 in casing	721	Surface
9 5/8 in casing	1674	Intermediate
7 in liner/casing	2540	Production

Significant Historical Events and Lessons

Date / Depth	Event	Severity	Evidence / mitigation / lesson
2022-09-29 849 m	Pressure Spike	Critical	Short-duration high-pressure excursion was recorded. Mitigation: Reduce pump rate, verify restriction and restore circulation gradually. Lesson: Use depth-matched offset hydraulic baseline for early warning.
2022-09-27 768 m	Stuck Pipe	High	High drag was recorded while circulating remained possible. Mitigation: Apply approved freeing procedure and avoid excessive overpull. Lesson: Rising torque plus falling ROP should trigger hole-cleaning action.
2022-10-05 1088 m	Pressure Spike	High	Circulating pressure climbed without equivalent torque change. Mitigation: Reduce pump rate, verify restriction and restore circulation gradually. Lesson: Correlate pressure anomalies with flow before escalating risk.
2022-11-05 2267 m	Mud Loss	High	Flow-out dropped below flow-in with pit loss. Mitigation: Optimize hydraulics and maintain conservative ROP through loss interval. Lesson: Prepare LCM package before approaching correlated offset-well loss depth.
2022-11-09 2414 m	Mud Loss	High	Flow-out dropped below flow-in with pit loss. Mitigation: Optimize hydraulics and maintain conservative ROP through loss interval. Lesson: Prepare LCM package before approaching correlated offset-well loss depth.
2022-11-10 2432 m	Fishing Operation	High	Normal pipe-recovery attempts were unsuccessful. Mitigation: Confirm fish geometry before selecting retrieval tool. Lesson: Capture retrieval outcome as institutional knowledge.
2022-10-02 949 m	Mud Loss	Medium	Intermittent circulation losses developed while drilling ahead. Mitigation: Reduce ECD, treat losses with LCM and confirm stable returns. Lesson: Use conservative hydraulics when re-entering equivalent loss-prone interval.

Completion Summary

The synthetic well reached 2887 m MD in the Barail interval. The NWIS knowledge record links 12 historical operational events to depth-matched telemetry. Risk classification is derived from formation, depth, trajectory and event history rather than formation alone.

This report is generated solely for SIH/NWIS prototyping and model development.
