

WELL COMPLETION REPORT

SYNTHETIC SCANNED COPY - NWIS PROTOTYPE

Well ID: OIL-DRK-002
Well Name: Dirok-002
Field / District: Dirok / Dibrugarh
Formation: Kopili (KOP)
Spud / Completion: 1999-10-24 / 2000-03-01
Measured depth / TVD: 3197 m / 3163 m
Formation interval: 1899-2794 m
Lithology: Compact shale with sandstone streaks
Mud system: KCl Polymer WBM
NWIS well risk: High (56.9/100)

SIGNIFICANT EVENTS:

1999-12-02 | Stuck Pipe | Critical | 1112 m
Observation: Torque and drag increased while ROP declined
Mitigation: Condition mud and verify cuttings transport before connection
Lesson: Use offset stuck-pipe depth to increase circulation and reaming frequency

1999-11-21 | Mud Loss | High | 848 m
Observation: Flow-out dropped below flow-in with pit loss
Mitigation: Optimize hydraulics and maintain conservative ROP through loss interval
Lesson: Track flow balance and pit volume trend before losses become severe

SCANNED
