

WELL COMPLETION REPORT (SYNTHETIC)

OIL-DRK-011 - Dirok-011

NWIS prototype document - not an Oil India Limited operational record

API Number	OIL-ASM-000128
Field / District	Dirok / Dibrugarh
Block	OALP-III-08
Basin	Assam-Arakan
Formation	Girujan (GRJ)
Spud / Completion	2018-06-12 / 2018-09-24
Measured / TVD	2303 m / 2266 m
Trajectory	Vertical; inc 2.6 deg; az 20.9 deg
Formation Interval	1168-1854 m
Lithology	Claystone-sandstone alternation
Pore Pressure Reference	2158 psi
Fracture Gradient	14.17 ppg
Mud System	Low-Solids WBM
NWIS Well Risk	Low (39.2/100)

Casing Program

String	Set Depth (m)	Purpose
20 in conductor	80	Conductor
13 3/8 in casing	575	Surface
9 5/8 in casing	1335	Intermediate
7 in liner/casing	2026	Production

Significant Historical Events and Lessons

Date / Depth	Event	Severity	Evidence / mitigation / lesson
2018-07-06 658 m	Mud Loss	Critical	Active pit volume declined during stable pump rate. Mitigation: Optimize hydraulics and maintain conservative ROP through loss interval. Lesson: Track flow balance and pit volume trend before losses become severe.
2018-08-07 1346 m	Kick	Critical	Unexpected background gas rise preceded influx. Mitigation: Increase mud weight within fracture-margin limits and monitor gas trend. Lesson: Escalate connection-gas trends before entering correlated pressure zone.
2018-07-14 829 m	Stuck Pipe	High	Rotary movement deteriorated progressively. Mitigation: Reduce ROP and increase circulation before high-angle interval. Lesson: Rising torque plus falling ROP should trigger hole-cleaning action.
2018-07-22 1008 m	Torque Spike	High	Torque rose without corresponding pressure anomaly. Mitigation: Monitor torque derivative rather than absolute torque alone. Lesson: Torque-rate change is a useful precursor even when pressure is stable.
2018-08-02 1234 m	NPT	High	Drilling parameters were stable but operations were suspended. Mitigation: Verify equipment health before resuming drilling. Lesson: Recurring equipment downtime should influence planning and spares.
2018-08-03 1255 m	NPT	High	ROP dropped to zero during equipment unavailability. Mitigation: Maintain critical spares for recurring equipment failures. Lesson: Separate geological risk from equipment-driven NPT in analytics.
2018-09-02 1865 m	Kick	High	Unexpected background gas rise preceded influx. Mitigation: Re-establish overbalance and monitor pit/flow balance. Lesson: Treat pit gain plus gas increase as an early influx indicator.

Completion Summary

The synthetic well reached 2303 m MD in the Girujan interval. The NWIS knowledge record links 15 historical operational events to depth-matched telemetry. Risk classification is derived from formation, depth, trajectory and event history rather than formation alone.

This report is generated solely for SIH/NWIS prototyping and model development.
