

WELL COMPLETION REPORT (SYNTHETIC)

OIL-KMC-009 - Kumchai-009

NWIS prototype document - not an Oil India Limited operational record

API Number	OIL-ASM-000108
Field / District	Kumchai / Tinsukia
Block	OALP-IV-04
Basin	Assam-Arakan
Formation	Tipam (TIP)
Spud / Completion	1999-09-05 / 1999-11-09
Measured / TVD	2594 m / 2571 m
Trajectory	Directional; inc 35.5 deg; az 310.4 deg
Formation Interval	1426-2124 m
Lithology	Fluvial sandstone with clay streaks
Pore Pressure Reference	2886 psi
Fracture Gradient	14.86 ppg
Mud System	Glycol-PHPA WBM
NWIS Well Risk	Moderate (47.3/100)

Casing Program

String	Set Depth (m)	Purpose
20 in conductor	80	Conductor
13 3/8 in casing	648	Surface
9 5/8 in casing	1504	Intermediate
7 in liner/casing	2282	Production

Significant Historical Events and Lessons

Date / Depth	Event	Severity	Evidence / mitigation / lesson
1999-09-30 1113 m	Fishing Operation	Critical	Downhole tool remained unrecovered after freeing attempts. Mitigation: Confirm fish geometry before selecting retrieval tool. Lesson: Capture retrieval outcome as institutional knowledge.
1999-10-06 1338 m	Torque Spike	High	Torque rose without corresponding pressure anomaly. Mitigation: Monitor torque derivative rather than absolute torque alone. Lesson: Torque-rate change is a useful precursor even when pressure is stable.
1999-10-09 1459 m	Kick	High	Unexpected background gas rise preceded influx. Mitigation: Shut in, verify influx and circulate using approved well-control procedure. Lesson: Escalate connection-gas trends before entering correlated pressure zone.
1999-10-22 1956 m	Cementing Issue	High	Observed returns did not match calculated displacement. Mitigation: Review loss history before cementing equivalent interval. Lesson: Plan conservative displacement rate in weak formations.
1999-11-03 2383 m	Mud Loss	High	Intermittent circulation losses developed while drilling ahead. Mitigation: Spot graded LCM pill and circulate at reduced rate. Lesson: Track flow balance and pit volume trend before losses become severe.
1999-09-14 493 m	Stuck Pipe	Medium	Torque and drag increased while ROP declined. Mitigation: Condition mud and verify cuttings transport before connection. Lesson: Use offset stuck-pipe depth to increase circulation and reaming frequency.
1999-09-16 582 m	Fishing Operation	Medium	BHA retrieval required specialized tools. Mitigation: Maintain clear event chronology and NPT accounting during recovery. Lesson: Early stuck-pipe escalation may reduce probability of fishing.

Completion Summary

The synthetic well reached 2594 m MD in the Tipam interval. The NWIS knowledge record links 14 historical operational events to depth-matched telemetry. Risk classification is derived from formation, depth, trajectory and event history rather than formation alone.

This report is generated solely for SIH/NWIS prototyping and model development.
