

DAILY DRILLING REPORT (SYNTHETIC)

OIL-GLK-001 - Geleki-001

NWIS prototype document - not an Oil India Limited operational record

Field / Formation	Geleki / Barail
Report Timestamp	1998-07-19 18:00:00
Current Depth	2603.0 m
Mud System	KCl Polymer WBM
Well Risk	Moderate (45.2/100)
Latest Alert	Normal

Recent Drilling Parameters

Timestamp	Depth	SPP	Torque	RPM	MW	Flow In/Out	ROP	State

Operational Events / Lessons

Kick (Medium) at 1682 m: Kick at 1682 m in Barail. Pit gain and flow with pumps off were observed. Shut in well and recorded pressures. Outcome: Well stabilized after controlled circulation. Gas 158 units; pit change +12.1 bbl; mud weight 10.38 ppg. Recommended action: Review mud-weight margin 50 m before correlated kick depth

Stuck Pipe (Medium) at 1856 m: Stuck Pipe at 1856 m in Barail. Torque and drag increased while ROP declined. Stopped drilling and circulated bottoms-up. Outcome: BHA freed and hole conditioned before drilling resumed. Torque 280 kNm, drag 22.1 t, ROP 7.2 m/h. Recommended action: Plan preventive wiper trip near analogous interval

Pressure Spike (High) at 1971 m: Pressure Spike at 1971 m in Barail. Pressure trend exceeded recent moving baseline. Stopped drilling and circulated at controlled rate. Outcome: Restriction cleared without further escalation. SPP 3634 psi at flow-in 694 LPM. Recommended action: Alert on sustained SPP deviation at constant flow

Mud Loss (Medium) at 2167 m: Mud Loss at 2167 m in Barail. Flow-out dropped below flow-in with pit loss. Prepared graded lost-circulation pill. Outcome: Circulation stabilized after treatment. Flow balance: 761/633 LPM (in/out); pit change -3.3 bbl. Recommended action: Pre-stage LCM and set early-warning threshold on flow-out deficit

This DDR is generated from synthetic telemetry for OCR/NLP/RAG and risk-engine prototyping.
