Operational Events / Lessons

Pressure Spike (High) at 1132 m: Pressure Spike at 1132 m in Barail. Pressure trend exceeded recent moving baseline. Conditioned hole before restoring flow rate. Outcome: Operations resumed after stable pressure trend. SPP 2740 psi at flow-in 773 LPM. Recommended action: Compare SPP against offset-well envelope at equivalent depth

Mud Loss (High) at 1823 m: Mud Loss at 1823 m in Barail. Partial returns observed at shale shaker. Prepared graded lost-circulation pill. Outcome: Loss rate reduced to acceptable level. Flow balance: 742/679 LPM (in/out); pit change -6.3 bbl. Recommended action: Reduce pump rate/ECD before entering analogous interval

NPT (Medium) at 2621 m: NPT at 2621 m in Barail. ROP dropped to zero during equipment unavailability. Recorded downtime cause and maintenance action. Outcome: Downtime closed with maintenance record. Recommended action: Use offset NPT history in operational readiness review

Kick (High) at 2796 m: Kick at 2796 m in Barail. Drilling break followed by positive flow check. Increased monitoring frequency and prepared kill-weight mud. Outcome: Influx circulated out and overbalance restored. Gas 148 units; pit change +15.9 bbl; mud weight 11.61 ppg. Recommended action: Review mud-weight margin 50 m before correlated kick depth
