Operational Events / Lessons

Kick (High) at 1852 m: Kick at 1852 m in Tipam. Unexpected background gas rise preceded influx. Circulated influx under controlled conditions. Outcome: Influx circulated out and overbalance restored. Gas 255 units; pit change +17.0 bbl; mud weight 10.64 ppg. Recommended action: Review mud-weight margin 50 m before correlated kick depth

NPT (High) at 2323 m: NPT at 2323 m in Tipam. ROP dropped to zero during equipment unavailability. Isolated equipment and initiated maintenance. Outcome: Equipment restored and drilling resumed. Recommended action: Track recurring NPT cause by rig and equipment family

Pressure Spike (Medium) at 2450 m: Pressure Spike at 2450 m in Tipam. Pressure trend exceeded recent moving baseline. Stopped drilling and circulated at controlled rate. Outcome: Restriction cleared without further escalation. SPP 3890 psi at flow-in 818 LPM. Recommended action: Alert on sustained SPP deviation at constant flow

Fishing Operation (High) at 2506 m: Fishing Operation at 2506 m in Tipam. Downhole tool remained unrecovered after freeing attempts. Confirmed fish top and planned engagement method. Outcome: Retrieval completed with recorded NPT impact. Recommended action: Escalate prolonged stuck-pipe events before mechanical failure

This DDR is generated from synthetic telemetry for OCR/NLP/RAG and risk-engine prototyping.
