

WELL COMPLETION REPORT

SYNTHETIC SCANNED COPY - NWIS PROTOTYPE

Well ID: OIL-BGJ-002

Well Name: Baghjan-002

Field / District: Baghjan / Tinsukia

Formation: Tipam (TIP)

Spud / Completion: 2014-07-08 / 2014-11-23

Measured depth / TVD: 2501 m / 2461 m

Formation interval: 1483-2135 m

Lithology: Fine-medium sandstone with shale interbeds

Mud system: KCl Polymer WBM

NWIS well risk: Moderate (50.7/100)

SIGNIFICANT EVENTS:

2014-07-31 | Pressure Spike | Critical | 558 m

Observation: Pressure trend exceeded recent moving baseline

Mitigation: Reduce pump rate, verify restriction and restore circulation gradually

Lesson: Use depth-matched offset hydraulic baseline for early warning

2014-08-10 | Stuck Pipe | Critical | 738 m

Observation: Torque and drag increased while ROP declined

Mitigation: Reduce ROP and increase circulation before high-angle interval

Lesson: Use offset stuck-pipe depth to increase circulation and reaming frequency

SCANNED
