

WELL COMPLETION REPORT (SYNTHETIC)

OIL-BGJ-010 - Baghjan-010

NWIS prototype document - not an Oil India Limited operational record

API Number	OIL-ASM-000117
Field / District	Baghjan / Tinsukia
Block	OALP-IV-03
Basin	Assam-Arakan
Formation	Lakadong+Therria (LKT)
Spud / Completion	2015-06-22 / 2015-10-24
Measured / TVD	4010 m / 3962 m
Trajectory	Vertical; inc 5.4 deg; az 270.8 deg
Formation Interval	2354-3860 m
Lithology	Sandstone-coal-shale sequence
Pore Pressure Reference	4651 psi
Fracture Gradient	14.85 ppg
Mud System	Low-Solids WBM
NWIS Well Risk	Moderate (45.9/100)

Casing Program

String	Set Depth (m)	Purpose
20 in conductor	80	Conductor
13 3/8 in casing	1002	Surface
9 5/8 in casing	2325	Intermediate
7 in liner/casing	3528	Production

Significant Historical Events and Lessons

Date / Depth	Event	Severity	Evidence / mitigation / lesson
2015-08-17 1976 m	Kick	High	Pit gain and flow with pumps off were observed. Mitigation: Increase mud weight within fracture-margin limits and monitor gas trend. Lesson: Maintain mud-weight window using offset pressure evidence.
2015-09-09 2663 m	Stuck Pipe	High	Rotary movement deteriorated progressively. Mitigation: Reduce ROP and increase circulation before high-angle interval. Lesson: Avoid prolonged static periods in high-drag interval.
2015-07-06 618 m	Stuck Pipe	Medium	Hookload became erratic during pipe movement. Mitigation: Condition mud and verify cuttings transport before connection. Lesson: Avoid prolonged static periods in high-drag interval.
2015-08-07 1656 m	Stuck Pipe	Medium	Hookload became erratic during pipe movement. Mitigation: Improve hole cleaning, work pipe and back-ream within operating envelope. Lesson: Avoid prolonged static periods in high-drag interval.
2015-09-01 2431 m	Cementing Issue	Medium	Cement returns were below planned percentage. Mitigation: Control displacement rate and reconcile pumped/returned volumes. Lesson: Volume imbalance is an important cement-placement warning.
2015-09-14 2817 m	Mud Loss	Medium	Flow-out dropped below flow-in with pit loss. Mitigation: Reduce ECD, treat losses with LCM and confirm stable returns. Lesson: Track flow balance and pit volume trend before losses become severe.
2015-09-15 2863 m	Pressure Spike	Medium	Pressure trend exceeded recent moving baseline. Mitigation: Use pressure trend thresholds referenced to depth and flow rate. Lesson: Use depth-matched offset hydraulic baseline for early warning.

Completion Summary

The synthetic well reached 4010 m MD in the Lakadong+Therria interval. The NWIS knowledge record links 10 historical operational events to depth-matched telemetry. Risk classification is derived from formation, depth, trajectory and event history rather than formation alone.

This report is generated solely for SIH/NWIS prototyping and model development.
