

WELL COMPLETION REPORT (SYNTHETIC)

OIL-BGJ-012 - Baghjan-012

NWIS prototype document - not an Oil India Limited operational record

API Number	OIL-ASM-000141
Field / District	Baghjan / Tinsukia
Block	OALP-IV-03
Basin	Assam-Arakan
Formation	Tipam (TIP)
Spud / Completion	2017-08-31 / 2018-02-26
Measured / TVD	2639 m / 2616 m
Trajectory	Vertical; inc 2.7 deg; az 345.9 deg
Formation Interval	1234-1973 m
Lithology	Sandstone-siltstone sequence
Pore Pressure Reference	2417 psi
Fracture Gradient	15.00 ppg
Mud System	Low-Solids WBM
NWIS Well Risk	Low (42.3/100)

Casing Program

String	Set Depth (m)	Purpose
20 in conductor	80	Conductor
13 3/8 in casing	659	Surface
9 5/8 in casing	1530	Intermediate
7 in liner/casing	2322	Production

Significant Historical Events and Lessons

Date / Depth	Event	Severity	Evidence / mitigation / lesson
2017-11-27 1412 m	Cementing Issue	Critical	Observed returns did not match calculated displacement. Mitigation: Control displacement rate and reconcile pumped/returned volumes. Lesson: Plan conservative displacement rate in weak formations.
2017-10-10 726 m	Kick	High	Drilling break followed by positive flow check. Mitigation: Increase mud weight within fracture-margin limits and monitor gas trend. Lesson: Maintain mud-weight window using offset pressure evidence.
2017-11-06 1117 m	Mud Loss	High	Partial returns observed at shale shaker. Mitigation: Reduce ECD, treat losses with LCM and confirm stable returns. Lesson: Use conservative hydraulics when re-entering equivalent loss-prone interval.
2017-12-29 1848 m	Stuck Pipe	High	High drag was recorded while circulating remained possible. Mitigation: Reduce ROP and increase circulation before high-angle interval. Lesson: Avoid prolonged static periods in high-drag interval.
2017-10-02 601 m	Stuck Pipe	Medium	Torque and drag increased while ROP declined. Mitigation: Apply approved freeing procedure and avoid excessive overpull. Lesson: Use offset stuck-pipe depth to increase circulation and reaming frequency.
2017-10-09 717 m	Pressure Spike	Medium	Standpipe pressure increased rapidly at nearly stable flow. Mitigation: Reduce pump rate, verify restriction and restore circulation gradually. Lesson: Use depth-matched offset hydraulic baseline for early warning.
2017-10-12 762 m	Kick	Medium	Unexpected background gas rise preceded influx. Mitigation: Maintain trip margin and use conservative connection practices. Lesson: Treat pit gain plus gas increase as an early influx indicator.

Completion Summary

The synthetic well reached 2639 m MD in the Tipam interval. The NWIS knowledge record links 17 historical operational events to depth-matched telemetry. Risk classification is derived from formation, depth, trajectory and event history rather than formation alone.

This report is generated solely for SIH/NWIS prototyping and model development.
