

WELL COMPLETION REPORT (SYNTHETIC)

OIL-BRH-009 - Borholla-009

NWIS prototype document - not an Oil India Limited operational record

API Number	OIL-ASM-000106
Field / District	Borholla / Jorhat
Block	PEL-ASSAM-07
Basin	Assam-Arakan
Formation	Barail (BAR)
Spud / Completion	2014-02-25 / 2014-05-09
Measured / TVD	2764 m / 2741 m
Trajectory	Vertical; inc 0.4 deg; az 299.3 deg
Formation Interval	1432-2058 m
Lithology	Sandstone-shale-coal sequence
Pore Pressure Reference	2685 psi
Fracture Gradient	15.72 ppg
Mud System	Low-Solids WBM
NWIS Well Risk	Moderate (45.6/100)

Casing Program

String	Set Depth (m)	Purpose
20 in conductor	80	Conductor
13 3/8 in casing	691	Surface
9 5/8 in casing	1603	Intermediate
7 in liner/casing	2432	Production

Significant Historical Events and Lessons

Date / Depth	Event	Severity	Evidence / mitigation / lesson
2014-03-27 1270 m	Kick	Critical	Flow-out exceeded flow-in and gas units increased. Mitigation: Re-establish overbalance and monitor pit/flow balance. Lesson: Treat pit gain plus gas increase as an early influx indicator.
2014-03-29 1346 m	Stuck Pipe	Critical	High drag was recorded while circulating remained possible. Mitigation: Reduce ROP and increase circulation before high-angle interval. Lesson: Rising torque plus falling ROP should trigger hole-cleaning action.
2014-03-24 1154 m	Mud Loss	High	Intermittent circulation losses developed while drilling ahead. Mitigation: Optimize hydraulics and maintain conservative ROP through loss interval. Lesson: Use conservative hydraulics when re-entering equivalent loss-prone interval.
2014-04-18 2057 m	Cementing Issue	High	Observed returns did not match calculated displacement. Mitigation: Use staged cementing response when returns deteriorate. Lesson: Offset loss history should inform cementing hydraulics.
2014-04-20 2112 m	Mud Loss	High	Flow-out dropped below flow-in with pit loss. Mitigation: Spot graded LCM pill and circulate at reduced rate. Lesson: Prepare LCM package before approaching correlated offset-well loss depth.
2014-03-08 576 m	Torque Spike	Medium	High torque developed while WOB remained elevated. Mitigation: Use staged parameter reduction to avoid torsional oscillation. Lesson: Torque-rate change is a useful precursor even when pressure is stable.
2014-04-06 1630 m	Pressure Spike	Medium	Short-duration high-pressure excursion was recorded. Mitigation: Condition hole and confirm pressure normalization. Lesson: Rate-of-change in pressure is more informative than a fixed threshold.

Completion Summary

The synthetic well reached 2764 m MD in the Barail interval. The NWIS knowledge record links 11 historical operational events to depth-matched telemetry. Risk classification is derived from formation, depth, trajectory and event history rather than formation alone.

This report is generated solely for SIH/NWIS prototyping and model development.
