

WELL COMPLETION REPORT

SYNTHETIC SCANNED COPY - NWIS PROTOTYPE

Well ID: OIL-CHR-002
Well Name: Charali-002
Field / District: Charali / Biswanath
Formation: Girujan (GRJ)
Spud / Completion: 2008-05-13 / 2008-07-05
Measured depth / TVD: 2035 m / 1998 m
Formation interval: 1164-1867 m
Lithology: Claystone-sandstone alternation
Mud system: Glycol-PHPA WBM
NWIS well risk: Low (31.3/100)

SIGNIFICANT EVENTS:

2008-06-22 | Kick | Critical | 1576 m
Observation: Flow-out exceeded flow-in and gas units increased
Mitigation: Maintain trip margin and use conservative connection practices
Lesson: Treat pit gain plus gas increase as an early influx indicator

2008-05-28 | Mud Loss | High | 698 m
Observation: Intermittent circulation losses developed while drilling ahead
Mitigation: Spot graded LCM pill and circulate at reduced rate
Lesson: Use conservative hydraulics when re-entering equivalent loss-prone interval

SCANNED
