

# WELL COMPLETION REPORT

SYNTHETIC SCANNED COPY - NWIS PROTOTYPE

Well ID: OIL-DGB-002  
Well Name: Digboi-002  
Field / District: Digboi / Tinsukia  
Formation: Tipam (TIP)  
Spud / Completion: 2014-11-25 / 2015-01-21  
Measured depth / TVD: 2502 m / 2469 m  
Formation interval: 1185-1746 m  
Lithology: Sandstone-siltstone sequence  
Mud system: PHPA Water-Based Mud  
NWIS well risk: Moderate (47.1/100)

SIGNIFICANT EVENTS:

2014-12-09 | Stuck Pipe | High | 762 m  
Observation: Rotary movement deteriorated progressively  
Mitigation: Reduce ROP and increase circulation before high-angle interval  
Lesson: Avoid prolonged static periods in high-drag interval

2014-12-13 | NPT | High | 927 m  
Observation: Drilling parameters were stable but operations were suspended  
Mitigation: Use preventive maintenance triggers from repeated downtime patterns  
Lesson: Consistent NPT coding enables meaningful cross-well comparison
