

WELL COMPLETION REPORT

SYNTHETIC SCANNED COPY - NWIS PROTOTYPE

Well ID: OIL-DRK-001

Well Name: Dirok-001

Field / District: Dirok / Dibrugarh

Formation: Tipam (TIP)

Spud / Completion: 2017-11-18 / 2018-04-05

Measured depth / TVD: 2256 m / 2226 m

Formation interval: 1197-1943 m

Lithology: Fluvial sandstone with clay streaks

Mud system: PHPA Water-Based Mud

NWIS well risk: Moderate (50.5/100)

SIGNIFICANT EVENTS:

2017-12-23 | Mud Loss | Critical | 703 m

Observation: Flow-out dropped below flow-in with pit loss

Mitigation: Spot graded LCM pill and circulate at reduced rate

Lesson: Track flow balance and pit volume trend before losses become severe

2017-12-29 | Stuck Pipe | Critical | 787 m

Observation: Rotary movement deteriorated progressively

Mitigation: Improve hole cleaning, work pipe and back-ream within operating envelope

Lesson: Avoid prolonged static periods in high-drag interval
