

WELL COMPLETION REPORT (SYNTHETIC)

OIL-GLK-003 - Geleki-003

NWIS prototype document - not an Oil India Limited operational record

API Number	OIL-ASM-000029
Field / District	Geleki / Charaideo
Block	PEL-ASSAM-05
Basin	Assam-Arakan
Formation	Kopili (KOP)
Spud / Completion	2015-01-13 / 2015-06-15
Measured / TVD	3046 m / 3035 m
Trajectory	Vertical; inc 4.1 deg; az 201.9 deg
Formation Interval	1651-2349 m
Lithology	Shale-dominant interval with thin sandstone
Pore Pressure Reference	3506 psi
Fracture Gradient	15.42 ppg
Mud System	Low-Solids WBM
NWIS Well Risk	High (56.8/100)

Casing Program

String	Set Depth (m)	Purpose
20 in conductor	80	Conductor
13 3/8 in casing	761	Surface
9 5/8 in casing	1766	Intermediate
7 in liner/casing	2680	Production

Significant Historical Events and Lessons

Date / Depth	Event	Severity	Evidence / mitigation / lesson
2015-02-13 769 m	Pressure Spike	High	Standpipe pressure increased rapidly at nearly stable flow. Mitigation: Check solids loading and BHA hydraulics before drilling ahead. Lesson: Correlate pressure anomalies with flow before escalating risk.
2015-02-24 989 m	Fishing Operation	High	BHA retrieval required specialized tools. Mitigation: Maintain clear event chronology and NPT accounting during recovery. Lesson: Capture retrieval outcome as institutional knowledge.
2015-03-24 1516 m	Pressure Spike	High	Pressure trend exceeded recent moving baseline. Mitigation: Condition hole and confirm pressure normalization. Lesson: Use depth-matched offset hydraulic baseline for early warning.
2015-03-29 1626 m	Cementing Issue	High	Displacement pressure became unstable. Mitigation: Verify cement placement using pressure and volume balance. Lesson: Offset loss history should inform cementing hydraulics.
2015-04-13 1897 m	Kick	High	Unexpected background gas rise preceded influx. Mitigation: Maintain trip margin and use conservative connection practices. Lesson: Maintain mud-weight window using offset pressure evidence.
2015-05-30 2755 m	Torque Spike	High	Torque rose without corresponding pressure anomaly. Mitigation: Use staged parameter reduction to avoid torsional oscillation. Lesson: Torque-rate change is a useful precursor even when pressure is stable.
2015-03-07 1193 m	Cementing Issue	Medium	Cement density/returns trend indicated placement uncertainty. Mitigation: Use staged cementing response when returns deteriorate. Lesson: Offset loss history should inform cementing hydraulics.

Completion Summary

The synthetic well reached 3046 m MD in the Kopili interval. The NWIS knowledge record links 11 historical operational events to depth-matched telemetry. Risk classification is derived from formation, depth, trajectory and event history rather than formation alone.

This report is generated solely for SIH/NWIS prototyping and model development.
