

WELL COMPLETION REPORT (SYNTHETIC)

OIL-HPJ-008 - Hapjan-008

NWIS prototype document - not an Oil India Limited operational record

API Number	OIL-ASM-000091
Field / District	Hapjan / Tinsukia
Block	OALP-III-07
Basin	Assam-Arakan
Formation	Girujan (GRJ)
Spud / Completion	2020-09-29 / 2021-03-23
Measured / TVD	1864 m / 1831 m
Trajectory	Vertical; inc 3.6 deg; az 139.2 deg
Formation Interval	1107-1813 m
Lithology	Claystone-sandstone alternation
Pore Pressure Reference	2284 psi
Fracture Gradient	15.14 ppg
Mud System	PHPA Water-Based Mud
NWIS Well Risk	Low (35.7/100)

Casing Program

String	Set Depth (m)	Purpose
20 in conductor	74	Conductor
13 3/8 in casing	466	Surface
9 5/8 in casing	1081	Intermediate
7 in liner/casing	1640	Production

Significant Historical Events and Lessons

Date / Depth	Event	Severity	Evidence / mitigation / lesson
2020-10-22 360 m	Cementing Issue	High	Cement returns were below planned percentage. Mitigation: Use staged cementing response when returns deteriorate. Lesson: Volume imbalance is an important cement-placement warning.
2020-11-19 653 m	Pressure Spike	High	Circulating pressure climbed without equivalent torque change. Mitigation: Condition hole and confirm pressure normalization. Lesson: Rate-of-change in pressure is more informative than a fixed threshold.
2020-11-24 701 m	Pressure Spike	High	Short-duration high-pressure excursion was recorded. Mitigation: Reduce pump rate, verify restriction and restore circulation gradually. Lesson: Rate-of-change in pressure is more informative than a fixed threshold.
2020-12-19 962 m	Pressure Spike	High	Pressure trend exceeded recent moving baseline. Mitigation: Condition hole and confirm pressure normalization. Lesson: Correlate pressure anomalies with flow before escalating risk.
2021-02-21 1582 m	Kick	High	Unexpected background gas rise preceded influx. Mitigation: Increase mud weight within fracture-margin limits and monitor gas trend. Lesson: Maintain mud-weight window using offset pressure evidence.
2020-12-01 779 m	Mud Loss	Medium	Active pit volume declined during stable pump rate. Mitigation: Optimize hydraulics and maintain conservative ROP through loss interval. Lesson: Track flow balance and pit volume trend before losses become severe.
2020-12-05 821 m	Kick	Medium	Drilling break followed by positive flow check. Mitigation: Maintain trip margin and use conservative connection practices. Lesson: Escalate connection-gas trends before entering correlated pressure zone.

Completion Summary

The synthetic well reached 1864 m MD in the Girujan interval. The NWIS knowledge record links 14 historical operational events to depth-matched telemetry. Risk classification is derived from formation, depth, trajectory and event history rather than formation alone.

This report is generated solely for SIH/NWIS prototyping and model development.
